1. Introduction:

The size and geographical distribution of deaths in relation to prevalence of diseases, evaluation of risks of deaths from various causes at different ages, the medical implications of combination of the conditions resulting in death, proportion of deaths occurring in hospitals are a crucial aspect of interest to many professionals. Public health executives, Administrators, policy makers, researchers and other professionals, therefore depend heavily on analysis of causes of death for vital statistical data, for formulating National and State health care policies and programs. It is fundamental for monitoring as well as improving the methods of diagnosis and analysis and also plays an important role in advanced medical research. Medical Certification of Cause of Death forms are an integral part of the Vital Statistics System under Registration of Births and Deaths system which aims at providing a reliable database for generating cause specific mortality statistics on a regular basis.

Currently, Medical Research is facing challenges from the spread of a variety of disease like Cancer, AIDS, Heart Diseases, Juvenile diabetes, non-communicable & communicable diseases, Swine flu and Chikungunya etc. Good documentation of information on the causes of death is indispensable for tackling these issues. Recognizing this fact and in order to draw the profile of different natural and manmade causes of death, under the aegis of World Health Organization, the international community of Medical Professionals have codified most of the disease labeling them "International Classification of Diseases (ICD)". This ICD is customized to the Indian conditions under the scheme of 'Medical Certification of Cause of Death (MCCD)'.

This report is based on the 10th revision of ICD. The statistics presented in this report, give information on cause specific mortality cross classified by sex and age groups.

Methodology

The necessary data is collected in the prescribed formats i.e. form no.4 for institutional deaths and form no. 4A for non-institutional death. These both formats are to be filled up by the medical professional who has attended the deceased. Thereafter, these filled formats are to be submitted to the concerned registrars of the birth and death for the detailed tabulation as per the national list of causes of death based, based on the tenth revision of International classification of disease (ICD 10) for onward transmission to the Chief Registrar's office. Afterwards, the state government submits this to the office of the Registrar General of India in the standardized format for the national level consolidation.

Scheme of MCCD: Status of Implementation:

In order to take the MCCD Scheme forward in a systematic manner in the country, the Registrar General, India has been impressing upon all the States/Union Territories to bring

all hospitals (Government & Private) and private medical practitioners under its coverage, both in rural as well as urban areas by imposing issue of Notification. In this context, a notification has been issued by the Government of Rajasthan also to bring all Government medical institutions under the scheme of Medical Certification of Cause of Death and 2363 hospitals are reporting under this scheme. The scheme is limited to institutional deaths only. Though the sample is representative, sweeping generalizations are not recommended, since a large number of rural as well as urban events occurred at home are not being covered under this scheme.

MCCD Status: State Scenario: Flow of Data and Processing:

The certificates of cause(s) of death certified by the doctors are scrutinized & coded as per ICD-10th Revision derived as per the National list prescribed / designed by the Registrar General, India and sent in the prescribed format directly from the institutions covered under the scheme of MCCD on regular basis to the Directorate.

Scope of the report

The Rajasthan State government report on Medical Certification of Cause of Death – 2018 is based upon total 59943 (Males: 38783 and Females 21160) medically certified deaths (13.53 per cent of total registered deaths). As mentioned above, owing to different levels of efficiency of medical certification across the State, the number of deaths reported therein may lack the representative feature in the strict sense. However, it may be sufficient to throw some valuable insight into deaths by various cause groups.

2. Findings the introduction of leading cause of death:

During the year 2018 the highest leading cause of deaths are as follows :

1. Certain conditions originating in the perinatal period (22.97%)
 2. Diseases of Circulatory System (17.31%).
 3. Diseases of the Respiratory System (13.80%).
 4. Certain Infectious and Parasitic diseases (11.86%)
 5. Injury, Poisoning and certain other consequences of External Causes (8.05%).
- Among the major cause group “Certain conditions originating in the perinatal period”, have been registered the highest number of deaths (22.97%).

- "Diseases of Circulatory System" is the second leading cause group(17.31%),the highest deaths account48.08% for the "Diseases of pulmonary circulation and other forms of heart disease"
- 'Diseases of the Respiratory System' is the third leading cause group(13.80%) in which the highest deaths have been 52.36% for "Lower respiratory diseases".
- The fourth leading cause group is "Certain Infectious and Parasitic diseases"(11.86%) in this group major deaths are recorded 46.17% due to "Tuberculosis diseases'
- The major group comprising 'Injury, poisoning and certain other consequences of external causes' is the fifth leading cause(8.05%) in which the deaths have been recorded at its high 44.57% for the Other injuries of specified, unspecified and multiple body.

3. Finding the introduction of death by the Age group wise:

- Around 23.92% of reported medically certified deaths have been of the infants (age less than 1 year).
- About 95.35 % of infant deaths have been reported to be caused by 'Certain conditions originating in the perinatal period' out of total infant deaths.
- The lowest share (1.39%) of medically certified death is reported for the age group 1-4 years.
- Among the children aged '1-4', 'Certain infectious and parasitic diseases' have taken the highest toll of 22.28%.
- Around 2.58% of reported medically certified deaths have been of the children aged '5-14'.
- In the age group '5-14', major group 'Certain infectious and parasitic diseases' is in the topmost position with the share of 22.80%.
- The share of deaths in the age group "15-24" is 5.88% in total medically certified deaths.
- In the age-group of '15-24', major group, 'Injury Poisoning & certain other consequences of External causes' is the first among the leading causes contributing around 26.71%.

- Around 7.52% of reported medically certified deaths have been in the age group '25-34'.
- In the age-group of '25-34', major group, ' 'Injury, poisoning and certain other consequences of external causes' contribute around 22.52% of death under this age group.
- Around 8.82% of reported medically certified deaths have been in the age group '35-44'.
- In the age-group '35-44', major leading cause is 'Certain infectious and parasitic diseases' having share of 18.71% .
- Around 11.77% of reported medically certified deaths have been in the age group '45-54'.
- For the age-groups of '45-54', the leading causes of death is 'Diseases of Circulatory System' having 22.92%.
- 13.84% of the total medically certified death comes under the age group '55-64'.
- In this age group the first leading cause of death are 'Diseases of Circulatory System' (26.00%)..
- Around 7.41% of reported medically certified deaths have been in the age group '65-69'. The leading cause of death is 'Diseases of Circulatory System' (29.15%).
- The age group 70 and above contributes the maximum incidence (16.88%) of total medically certified deaths. The leading causes of death are 'Diseases of Circulatory System' (32.91%).

4. Finding the introduction of death by the Gender wise:

- Out of total medically certified death, 64.70% are from males and 35.30% from female.
- There is significant difference between males and females for all age groups under medically certified deaths.
- The difference in percentage is significantly high in all age groups.
- For infant age less than one year, 61.57% of deaths are from male and 38.43% female.

- Around 57.25% of deaths are from male and 42.75% female in the age group 1-4,.
- 57.06% are male deaths and 42.94% are female deaths in the age group 5-14.
- 15-24 age group comprises 55.29% male deaths and 44.71% female deaths.
- In the age group 25-34, 63.58% of deaths are from male and 36.42% female.
- Around 70.64% of deaths are from male and 29.36% female in the age group 35-44.
- In 45-54 age group, 71.43 % are male deaths and 28.57% are female deaths.
- 55-64 is the age group in which 68.80% are male deaths and 31.20% are female deaths.
- In the age group 65-69, male deaths are 66.95% and 33.05% are female deaths.
- In the age group 70 and above, 62.54% of deaths are from male and 37.46% female.

5. Comparison of MCCD and CRS Data:

The data on MCCD is presented as per the National List based on 10th revision of International Classification of Diseases (ICD-10), to facilitate meaningful comparison and drawing valid conclusions thereof. The report aims at summarizing the findings of the data reported on medically certified deaths for Rajasthan by age, sex and major cause-groups. 'The report on Medical Certification of Cause of Death – 2018' is based on 59943 (Males: 38783 and Females:21160) medically certified deaths. This represents 13.53 % of total registered deaths in the State during the year 2018.

Table 2.1 Number of deaths reported under CRS and MCCD

Year	Registered Deaths under CRS	Institutional Death	MCCD	Percentage of total Deaths	Percentage of Inst. Deaths
2017	424763	84457	59192	13.94	70.29
2018	443173	92175	59943	13.53	65.03

Table 2.1 gives a comparison of death under Civil Registration System (CRS) and Medically Certified Death. It may be noted that in the year 2018, only 13.53% of total registered deaths in the state are medically certified, which was 13.94% in the year 2017.

The age wise cause of death total for twenty major classifications are also separately given Appendix VIII.

Table 2.2 Age wise number of deaths reported under CRS and MCCD

Age group	Registered Deaths under CRS	MCCD	Percentage of total Deaths
0-4	10815	14338	132.57
